👤 Summary

Frontend-Focused Fullstack Developer specializing in React, Next.js, and modern JavaScript, with growing expertise in Node.js, Express.js, MongoDB (Mongoose), PostgreSQL, and Supabase. Passionate about building responsive, high-performance web applications with clean architecture, reusable components, and intuitive user experiences. Experienced integrating REST APIs, authentication systems, and third-party services to build scalable, production-ready applications.

🧠 Skills

Frontend Developer

- JavaScript (ES6+)
- React.js / Next.js
- TailwindCSS & Modern UI
- Framer Motion (Animations)
- Git / GitHub

Backend (Growing)

- Node.js / Express.js
- Supabase
- MongoDB (Mongoose)
- PostgreSQL

📁 Projects

Movue [🔗](#)

Solved decision fatigue in movie discovery by building a full-stack platform (React/Express) that combines TMDB movie data, YouTube trailer streaming, and OpenAI-powered personalized recommendations into one experience. Architected Express as a secure API-orchestration layer — centralizing calls to three external APIs and keeping keys off the client — while Supabase handles authentication and relational watchlist storage with Row Level Security, giving users a personalized, secure browsing flow from trending titles to genre-based discovery.

Freelancers Desk [🔗](#)

Solved the spreadsheet-chaos problem freelancers face by building a production-ready management dashboard (Next.js/Supabase/Tailwind) that unifies client management, project tracking, task management, and earnings analytics in one system. Architected Supabase as the full backend — PostgreSQL for storing users, clients, projects, and tasks, with Row Level Security enforcing per-user data isolation so each freelancer only ever sees their own data — plus an interactive revenue-chart dashboard turning raw earnings into at-a-glance insights. Deployed on Vercel.

NeuraFlow [🔗](#)

Designed to prove that heavy animation and performance don't have to be a tradeoff — built a modern AI SaaS landing page (React/Tailwind/Framer Motion) replicating a real-world product launch experience, complete with a cinematic AI demo sequence and a dynamic dashboard preview. Focused on clean, deliberate UI choices and optimized animation performance to keep the experience smooth despite the visual complexity.

Professional Experience

Field Supervisor, Alphabet Multimedia

02/2022 – 01/2023 | FCT Abuja, Nigeria

Prevented production delays by owning end-to-end quality assurance across concurrent multimedia projects, catching errors before delivery, while serving as the sole communication bridge between production, editorial, and client-facing teams to keep every project moving without conflicting priorities.

Transcriptionist, Rev [↗](#)

02/2019 – 01/2020 | Remote

Maintained consistent accuracy under strict deadline pressure while juggling multiple concurrent transcription assignments, delivering error-free work across a high-volume, fast-turnaround remote workload.

Education

SSCE, Macdaves Schools

2013 – 2016 | Kaduna, Nigeria

IJMB Advanced Level Program – ABU Zaria

03/2023 – 07/2024 | FCT Abuja, Nigeria

Ave Maria University, Nasarawa (2023–2024)

Relevant Coursework: Mathematics, Physics, Chemistry

Languages

- English

Certificates

- Responsive Web Design
- JavaScript
- Continuous learning via freeCodeCamp, YouTube, and official documentation.
